WAY TO REINVENT YOURSELF

1 Lifecycle Management

Lifecycle Management

## What is Lifecycle Management?

- Lifecycle management is to determine how an object will be subject to a storage policy during the time it is stored in S3.

- So, it is used to ;

  Transition objects to another storage class,

  Archive objects,

  Delete objects after a specified period of time.

RRS → Standard → Standard - IA → One Zone - IA → Intelligent Tier → Glacier → Glacier Deep Archive → RRS

Lifecycle Management
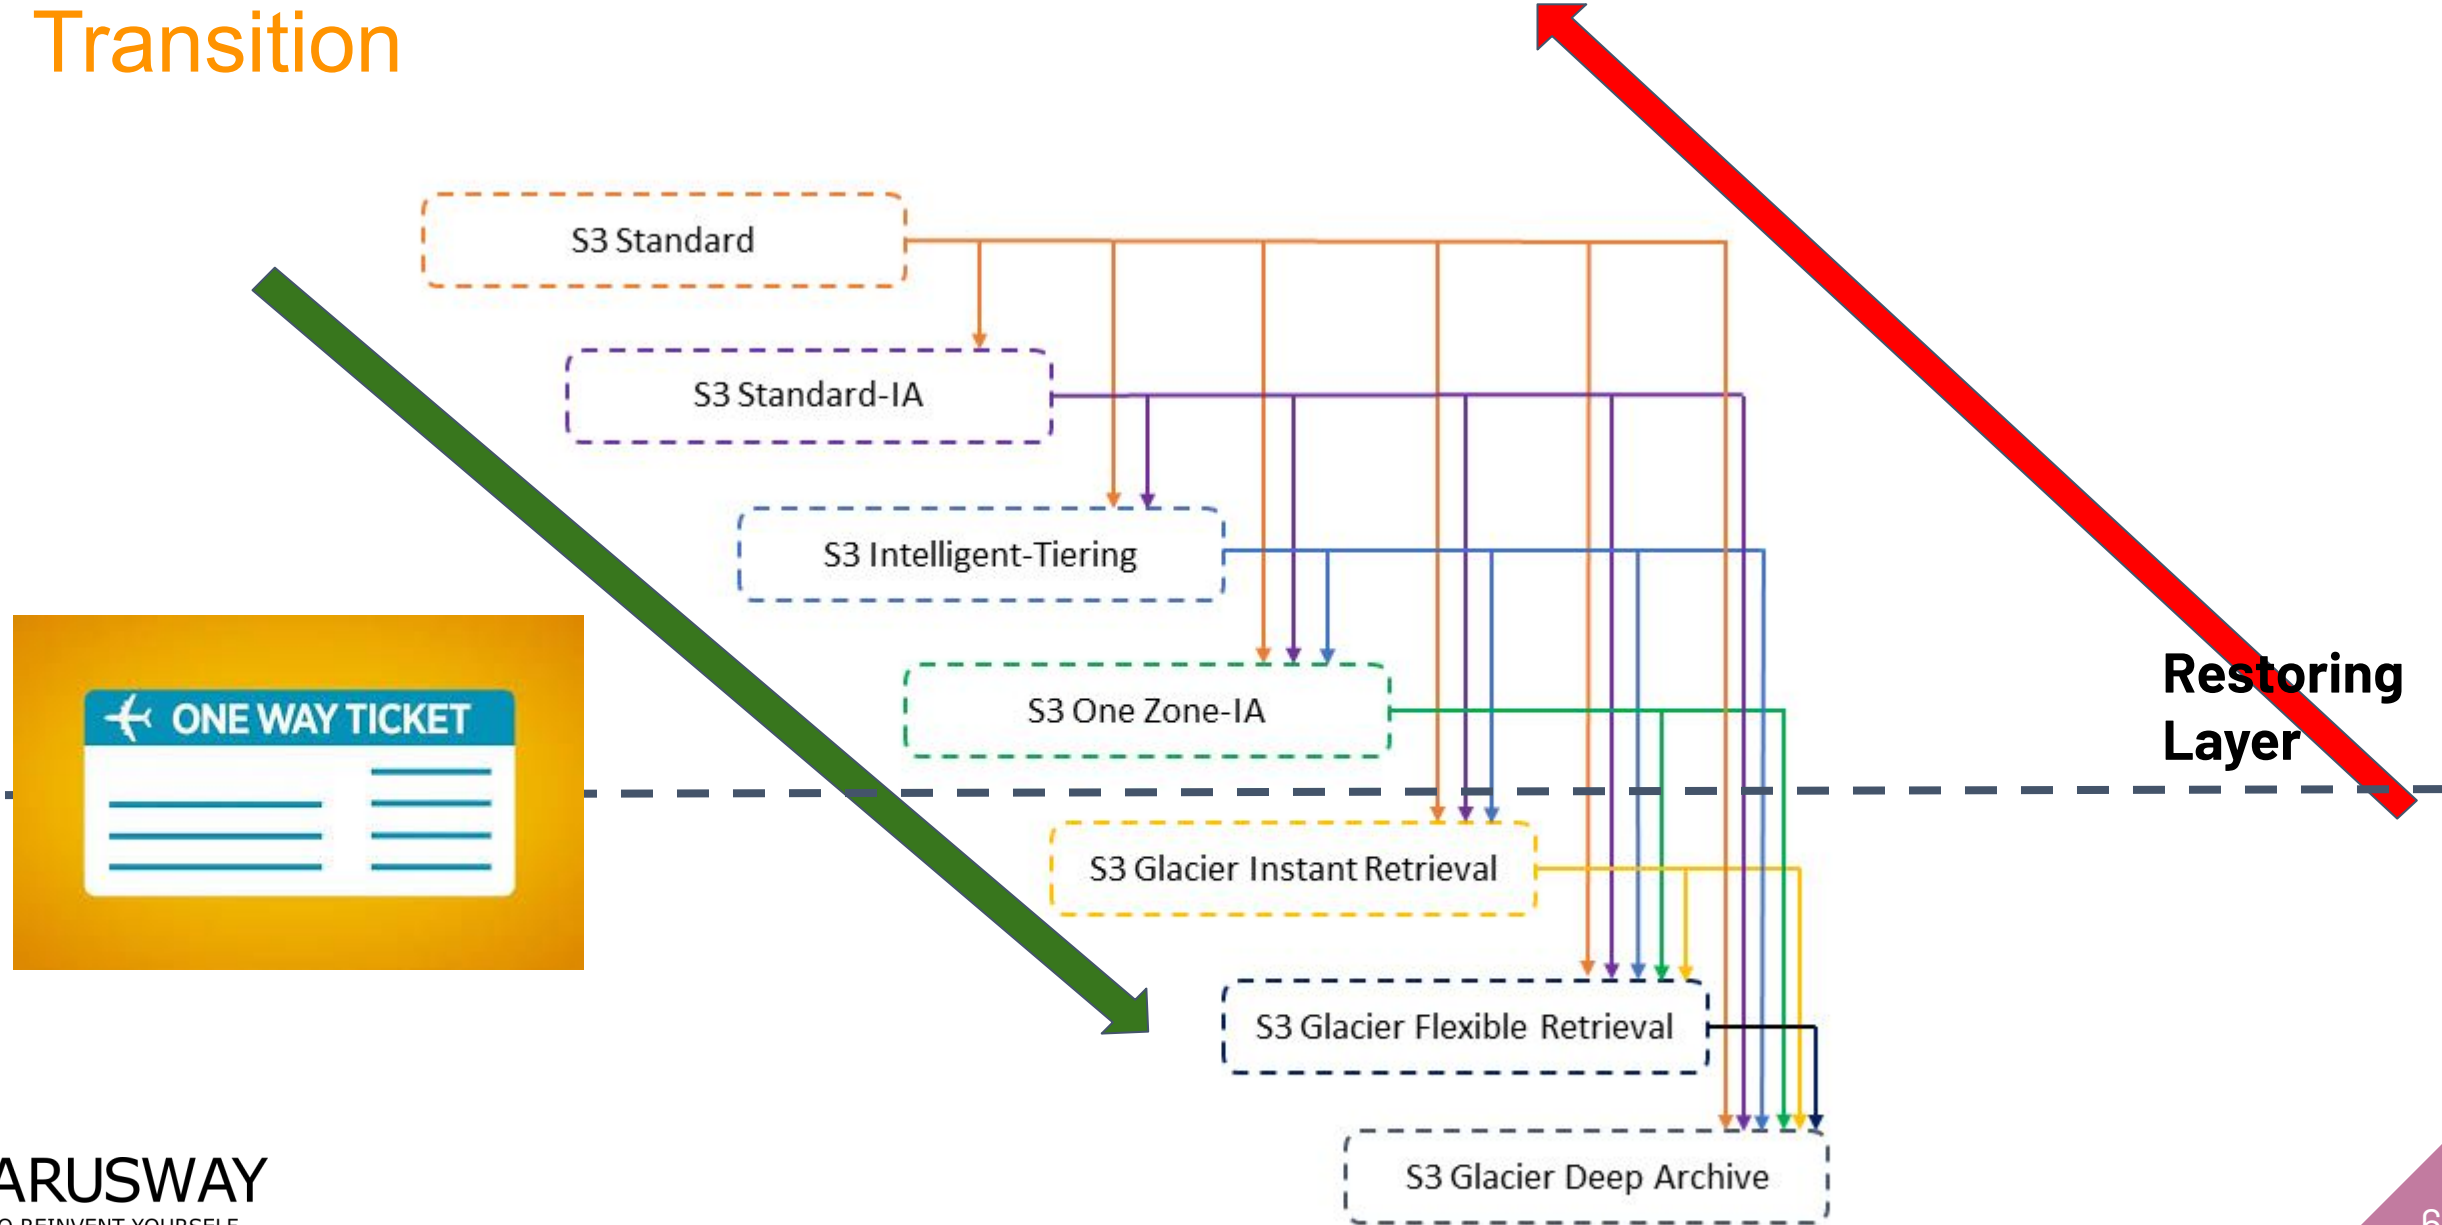

Lifecycle Management

- A lifecycle policy is bucket-base component.

- You can narrow Lifecycle Management by using a prefix or tag

- Available for both current and previous

- Minimum days for transition

Lifecycle Management

Advantage of Lifecycle Management

- It provides you to arrange your S3 inventory,

- You can save money by transition the objects to the cost-effective storage class,

- You can get rid of redundant objects,

Bucket Replication

What is Bucket Replication?

- Replication is to copy the objects in the buckets to another bucket in different region or in the same region.

- There are 2 types of replication in S3:

  - Cross-Region Replication (CRR) is used to copy objects in different AWS Regions

  - Same-Region Replication (SRR) is used to copy objects in the same AWS Region

Bucket Replication

Why Replication?

- Compliance requirements

- Backup

- Minimize latency

- Aggregating related data into a single bucket.

Bucket Replication

Replication Features

- Keep the object's metadata while replicating

- Replicating in Different storage class

- Option of changing ownership of the replicated object

- Synchronizing within 15 minutes.

- Narrowing replication based on prefix or tag

Bucket Replication

How S3 Replication Works?

Policy

Replication

Region-A

Region-B

Cross-Region Replication

Region-A

Same-Region Replication
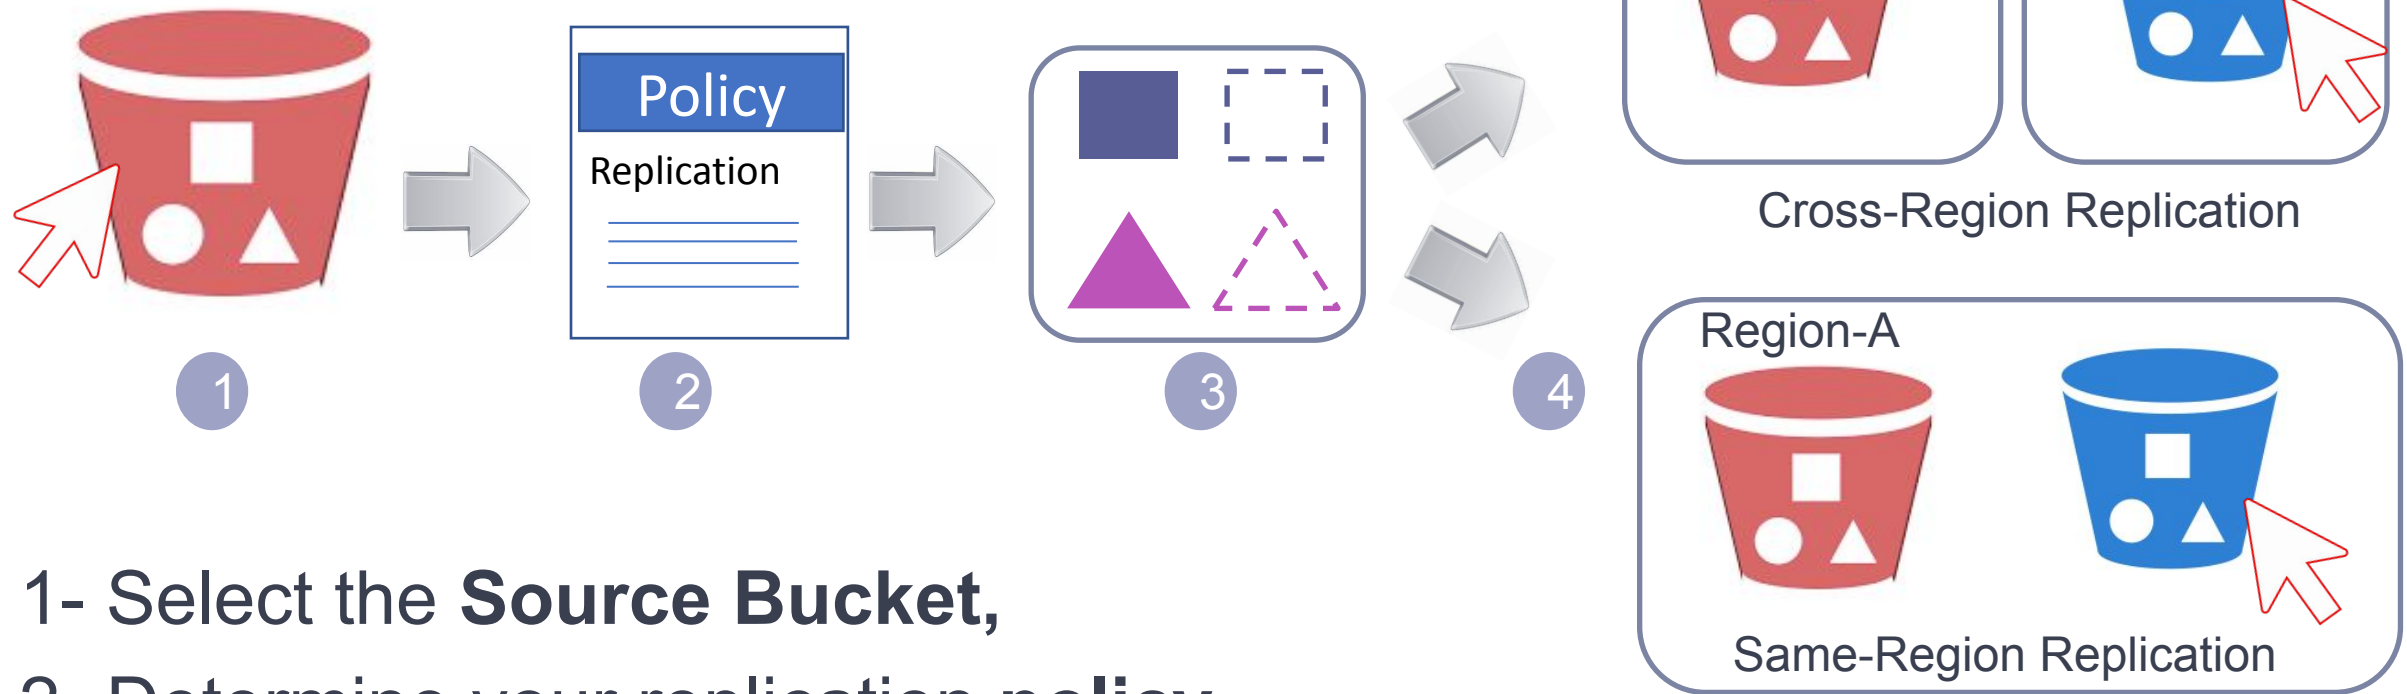

1- Select the **Source Bucket,**

2- Determine your replication **policy,**

3- Select your data set by object **tag, prefix or entire bucket,**

4- Select the **Destination Bucket** in the same region or in different region.
